Step 4: Install the pandas package .

To enter the pandas package enter the command in the CMD.exe Command: Pip install pandas

Pandas :

Pandas is one of the most widely used python libraries in data science. It provides high-performance, easy to use structures, and data analysis tools. This package is pre- installed in anaconda. is an open-source library that is built on top of NumPy library. It is a Python package that offers various data structures and operations for manipulating numerical data and time series. It is mainly popular for importing and analyzing data much easier. Pandas is fast and it has high- performance & productivity for users.

A screenshot of the Anaconda Prompt window. The title bar reads 'Anaconda Prompt (anaconda3) - pip install pandas'. The command prompt shows the command '(base) C:\Users\DELL>pip install pandas'. The output indicates that the requirement for pandas (1.4.2) is already satisfied in the current environment. It also lists other dependencies that are already satisfied: python-dateutil (2.8.2), numpy (1.21.5), pytz (2021.3), and six (1.16.0).

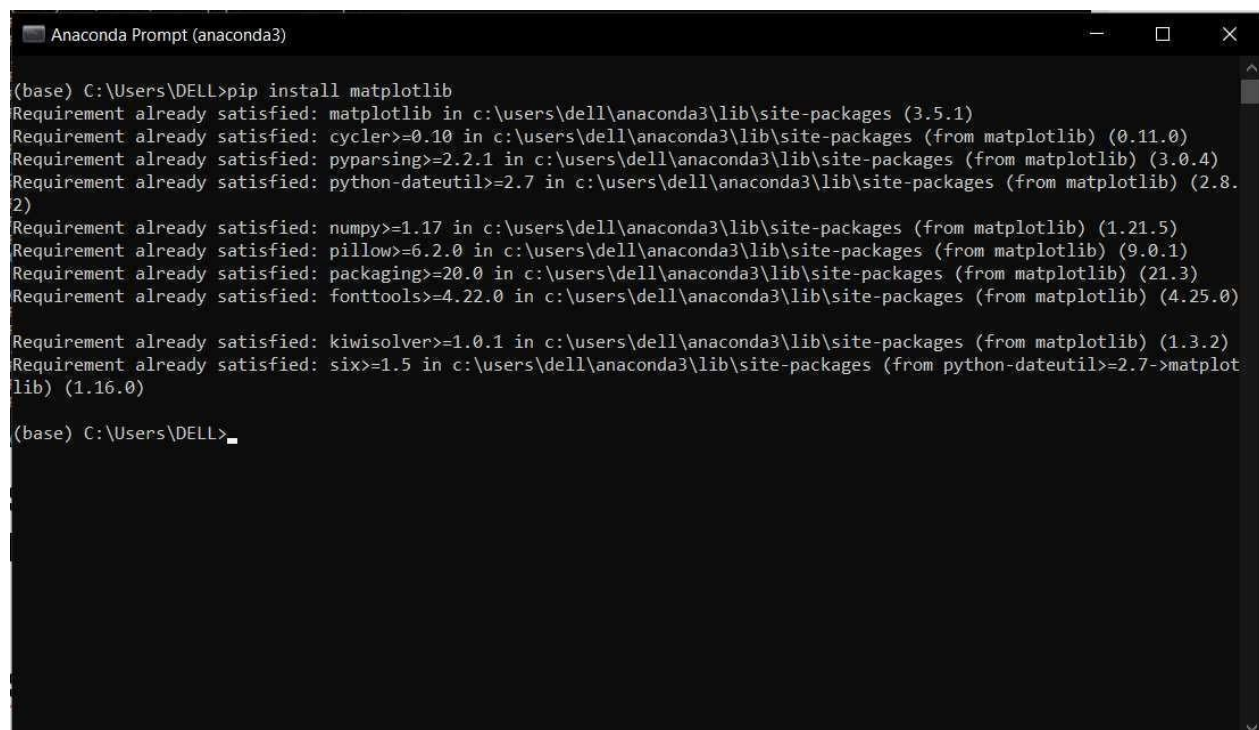

```
Anaconda Prompt (anaconda3) - pip install pandas
(base) C:\Users\DELL>pip install pandas
Requirement already satisfied: pandas in c:\users\dell\anaconda3\lib\site-packages (1.4.2)

Step 5: Install the Matplotlib package

To enter the Matplotlib package enter the command in the CMD.exe Command: Pip install Matplotlib

Matplotlib :

Matplotlib is a comprehensive library for creating static, animated, and interactive visualizations in Python. This package is pre-installed in anaconda .Matplotlib is an amazing visualization library in Python for 2D plots of arrays. Matplotlib is a multi-platform data visualization library built on NumPy arrays and designed to work with the broader SciPy stack. It was introduced by John Hunter in 2002.

A screenshot of the Anaconda Prompt (anaconda3) window. The title bar shows the window name and standard OS controls. The command prompt shows the user entering '(base) C:\Users\DELL>pip install matplotlib'. The output lists several requirements that are already satisfied, including matplotlib (3.5.1), cycler (0.11.0), pyparsing (3.0.4), python-dateutil (2.8.2), numpy (1.21.5), pillow (9.0.1), packaging (21.3), fonttools (4.25.0), kiwisolver (1.3.2), and six (1.16.0). The prompt ends with '(base) C:\Users\DELL>_'.
